INTERNATIONAL UNIVERSITY

29 October 2026

Time: 1 hour | *Autumn Term* | Maximum Marks: 100

Information and Communication Technologies (Code: ICT6001)

Instructor: Dr. Olzhas Ametov | **Student:** Төлеген Алихан Жәнібекұлы

---

1. (100 points) Web design

    1. **Header / Nav Component:** Adaptive navigation bar (horizontal flex container on desktop, transforming into a hidden burger menu on smartphones).
    2. **Hero Section Component:** Main screen with a relevant media background, structured header typography, and an emphasized Call to Action (CTA) element.
    3. **Grid Section Component:** Informational multi-column matrix (Grid), dynamically rearranging into a single-column format on mobile displays.
    4. **Feedback Form Component:** Interactive data collection form with input field validation attributes using pure CSS.
    5. **Footer Component:** Thematic footer with navigation links, a legal information block, and a system theme inversion selector.

    - **General Goal/Objective:** Create a web resource for a high-performance driving school to familiarize students with safety programs, the fleet of vehicles, and online registration for track sessions.
    - **Website Name:** Informational Website for an Extreme Driving School.
    - **Step-by-Step Component Breakdown:**
        1. *Header:* Sports style interface. Contact data, navigation nodes: "Programs", "Fleet", "Instructors". Button "Sign Up for the Race Track".
        2. *Hero Section:* Photo of a dynamic car on the track, heading "Learn to Fully Control the Car in Any Conditions" and a button "Choose a Course".
        3. *Grid Section:* Modular grid of training tracks ("Defensive Driving Basics", "Winter Drift", "Sports Track") indicating the hours of practical driving.
        4. *Feedback Form:* Data collection fields: "Driver's Full Name", "Driving Experience (in years)", "Phone Number", vehicle selection (Own / School Car).
        5. *Footer:* Safety regulations, links to motorsport federations, dark theme with carbon fiber texturing by default.

Universal Project Verification Checklist

(Common for all options)

1. Figma Layout Validation Criteria (Max 25 points)

☐ **Frame Responsiveness:** Two discrete frames with widths of 1440px and 390px are present (5 points).

☐ **Grid Structure:** Interface elements are aligned strictly according to the column grid (12 columns for desktop / 4 for mobile) (5 points).

☐ **Ergonomics and Usability:** In the mobile version, interactive controls and CTA buttons are integrated into the Thumb Zone (5 points).

☐ **Multi-theming:** Page layouts are provided in both Light and Dark themes; font contrast satisfies the WCAG specification (5 points).

☐ **Export Readiness:** Graphical assets are grouped, converted to vector paths, and prepared for export into SVG and WebP formats (5 points).

2. HTML/CSS Semantic Markup Validation Criteria (Max 40 points)

☐ **Markup Semantics:** The code structure of `index.html` is formed with native `<header>`, `<nav>`, `<main>`, `<section>`, `<article>`, and `<footer>` tags without excessive use of `<div>` (8 points).

☐ **Layout Construction:** The page skeleton and internal modules are implemented based on CSS Grid Layout and CSS Flexbox; block layout using tables (`<table>`) or floats (`float`) is absent (8 points).

☐ **Metric Responsiveness:** The `style.css` codebase contains no fixed width and margin/padding values in pixels (`px`) for content blocks; relative units of measurement (`rem`, `em`, `%`, `vh`, `vw`) are applied (8 points).

☐ **Cross-browser Responsiveness:** `@media (min-width: 1024px)` media queries are integrated; on mobile resolutions (from 320px to 480px), the horizontal scrollbar is absent (8 points).

☐ **Interactive Components:** The feedback form contains correct input field types (`type="email"`, `type="tel"`) and mandatory CSS validation attributes (`required`) (8 points).

3. Git and GitHub Pages Verification Criteria (Max 20 points)

☐ **Repository Accessibility:** The remote repository on GitHub has a `Public` status and contains the project files in the root directory (5 points).

☐ **Version Control History:** The `Commits` tab displays a chronological development sequence containing at least 3 atomic code commits (5 points).

☐ **Commit Culture:** Commit messages comply with semantic rules (e.g., `feat: add grid layout`, `fix: burger menu mobile styles`) (5 points).

☐ **Hosting Operation:** The GitHub Pages service is activated; the website compiles correctly and is accessible via a public web link without 404 errors (5 points).

4. Project Defense Verification Criteria (Max 15 points)

☐ **Implementation Identity:** The markup interface on GitHub Pages is visually and structurally identical to the developed layout in Figma frames (5 points).

☐ **Theoretical Preparation:** The student demonstrates deep knowledge of Mobile-First principles, Git version control methodology, and the operation of adaptive CSS Grid layouts (10 points).
